Frustrated with your PAMA CDS solution?

Clinical Decision Support
Powered by Stanson Health™

The Centers for Medicare & Medicaid Services' (CMS) Protecting Access to Medicare Act of 2014 (PAMA) requirement for advanced imaging services will start impacting your reimbursements on Jan. 1, 2022.[1]

There is still time to make the change to Stanson Health's PAMA solution to help transition to a smart clinical decision support (CDS) experience that is designed to be helpful, not burdensome, to providers. More than 200,000 providers are already utilizing Stanson's PAMA solution, a Clinical Decision Support Mechanism (CDSM) fully qualified by CMS, that can help meet the appropriate use criteria (AUC) to comply with the PAMA mandate.[2] Our PAMA solution is designed to deliver high-performing CDS with minimal interruptive alerts, to help avoid penalties and simplify implementation. That is why our customers describe the PAMA solution as a smart tool that is top notch and well done.

## TRANSITION TO STANSON HEALTH, WITH FIRST YEAR AT NO COST.*

+ ***It's not too late.*** We have expertise in transitioning from a legacy solution, can help guide your teams and can support the switch with minimal to no interruption.

+ ***It's easy to implement.*** Our implementation team will partner with you to offer a tailored project plan for your implementation transition including mapping, building and testing – all while your legacy solution is running in the background.

+ ***It does more than check a box.*** While it does satisfy the PAMA requirement, our innovative PAMA solution, driven by artificial intelligence (AI), helps the provider through guided clinical decision care support in the electronic health record (EHR) workflow, helping improve quality and cost of care with an easy and intuitive user experience.

"
With Stanson Health, you get excellent customer service, prompt responses, an amazing support team and a great PAMA product.
"

Dawn-Marie Rogers, MD
Chief Medical Information Officer
Memorial Healthcare System

Smart

Use both discrete and free text data that is made available from your electronic health record (EHR) to provide precise recommendations with as few interruptions as possible.

Clinical Advice Delivery Engine

NLP & ML | Score Calculation | Computer-aided Documentation

Fast

Implementation and Support

A clinical decision support (CDS) technical expert develops a detailed project plan to ensure timely rollout and works with members during and after implementation.
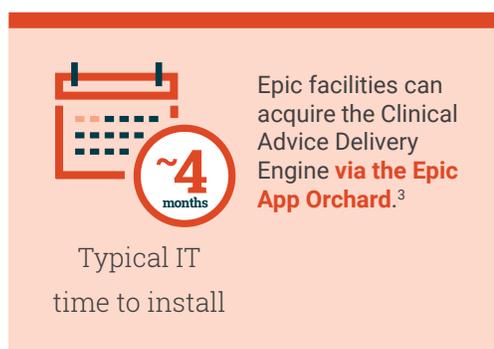

- Performs necessary configuration steps
- Tests workflows and CDS content for compliance
- Communicates progress and engages with member's clinical governance councils
- Provides real-time content updates due to cloud-based architecture
- Includes access to small team of Premier® resources throughout implementation, including IT

~4 months

Typical IT time to install

Epic facilities can acquire the Clinical Advice Delivery Engine **via the Epic App Orchard**.[3]

Effective

Create a positive environment for behavior change with a CDS experience that engages clinicians, fits within the workflow, and has the analytics to proactively engage in best practice conversations – all within an individual and a comparative performance lens. CDS consultations make use of AUC from qualified provider-led entity (qPLE) partners, whether accessed through the EHR or the web portal application. The aim is always to maximize the utility of imaging and provide the best possible care.

Focused Rollout to Drive Adoption

Our advanced imaging library contains AUC from our qPLE partners that target nuanced clinical scenarios within **CMS's eight priority clinical areas**.[4]

TRY IT AT NO COST FOR THE FIRST YEAR.*

Now is the time to move your organization away from an indications-based (picklist) offering and transition to a smart CDS approach using natural language processing (NLP) and machine learning (ML). We want to help during these tough financial times, so we are offering the first year at no cost when you transition from a legacy solution.*
